

# Remote Proxy Protection

Enhanced Anti-DDoS from Remote Proxy Protection

**BLOCKDOS**  
Your Business, Our Protection

By using our remote proxy protection, get total protection of your web infrastructure - Web, DNS and MX. The remote proxy adds an extra layer of protection over your network nodes, sending only clean traffic and blocking out every malicious request. The whole idea of remote proxy is to stay at your current hosting provider and route traffic to your web server through our proxy server. This not only protects your website but also make your IP anonymous thereby allowing us to deal with any malicious request to your website. Our enterprise plan is able to provide clean bandwidth of up to 1 Gbps and a data transfer of whopping 10TB!

## Technical Benefits

- **Instant Setup!** No migration needed, only a few DNS entries
- **Anonymous IP address,** your actual IP is never exposed
- **Protection from a multitude of DDoS attacks** - UDP, TCP, SYN Flood - everything!
- **Protection from Application Layer attacks** - Botnet, XML RPC & more
- **Get triple protection** - Web, DNS & Email - all network resources

## Feature Comparison

Features	Professional DDoS Protection	Enterprise DDoS Protection Series
Standard Protection	100GBPS	500GBPS
Maximum Protection	400GBPS	Unlimited
Standard PPS Protection	2 Million	5 Million
Maximum PPS Protection	10 Million	Unlimited*
Clean Bandwidth	100mbps	1000mbps
Data Transfer	2000GB	10000GB
