

Spam Protection

Cloud-based spam filtering with remarkable accuracy

BLOCKDOS
Your Business, Our Protection

Our cloud-based anti-spam service encompasses every aspect of spam related issues - false positives, malware in emails, lost emails, no tracking availability and low accuracy. Our service uses intelligent algorithms to constantly update and maintain rule based systems for tremendous accuracy in identifying spam and taking necessary action. We use popular virus scanners coupled with our own detection systems to give you total protection from viruses and malware in the email. The best part about our service is almost zero false positives - so rest assured, your important emails will pass straight through.

Instant Deployment

Setting up our Anti-spam cloud system is very simple. The entire process usually takes less than 5 minutes to get set up! In fact, you don't even have to tell Blockdos what email addresses on your domain are valid. During your testing phase, Blockdos anti-spam will auto-learn what email addresses on your domain are valid.

Almost zero false positives

A "false positive" is when a good email is blocked by a spam filter. While other spam filters use automated systems to "auto-learn" spam, a process that is prone to errors, Blockdos's rules are carefully engineered to ensure that only real spam is blocked.

Total Virus Protection

Like other spam filtering solutions, we use popular virus scanners to help block viruses. These scanners do catch some viruses, but we have added our own detection systems that watch for patterns and automatically block new viruses hours before commercial virus scanners have been updated.

Tremendous Accuracy

Unlike other spam filtering systems that rely on fancy algorithms that spammers can easily defeat, our Anti-spam's rule based system features tens of thousands of rules that are constantly updated and maintained by our live support team and automated bots 24/7.

Business Benefits

- **Save time** by rapid deployment of Anti-Spam cloud
- **Reduce costs** through our unlimited emails package
- **Never lose an email** through our automatic mail spooling
- **Access to your message log** through our 30 day tracking

Technical Benefits

- **Very high accuracy** through our constantly rule-based system
- **More security** through our built-in virus detection system
- **Nearly Zero false positives** through carefully engineered rulesets
- **Quarantine viewer** is built-in making sure no good email is ever lost

Spam Protection

Free Mail Spooling & Message Logs

If your mail server goes down, our service will automatically hold your clean messages until your mail server is back online. Mail is automatically held for up to 30 days. On top of this, we also provide 30 days of delivery logs for each clean message so that if a message goes missing, you can easily track it down.

Very reliable cloud based anti-spam

Our geographically diverse cloud based filtering runs on dedicated hardware. Or, to explain it without the cliché terminology, every customer domain is assigned to redundant servers in multiple geographical locations to ensure reliable email delivery.

BLOCKDOS Your Business, Our Protection

BlockDoS is a leading Canadian organization, established in 2005 as the most Secured Dedicated Hosting and Distributed Denial of Service (DDoS) Mitigation Service provider. We guarantee 99.9% uptime SLA on Enterprise Protection solution. Once your website is secured by BlockDoS, all the traffic will be routed through our global network of high-powered servers that inspect all incoming traffic, keeping hackers out while accelerating your traffic. BlockDoS delivers state of the art IT security solutions and excellence in business performance by ensuring a high level of security of the IT services; delivering a cost effective and sustained level of security that is aligned with needs of our clients; and developing and maintaining high levels of confidentiality, integrity and availability.
