SSL Certificates

Complete suite of SSL Certificates to Protect Your Websites

BLOCKDOS
Your Business, Our Protection

Organizations today require comprehensive security for their websites in an effort to build trust with their users and to secure their online transactions. Hackers are in a constant progression to develop more and more sophisticated methodologies to bypass website security and cause damage on an organization or its clients. Responsible business owners make sure they have necessary protections in place not just only to secure their websites but also to gain trust from their customers. SSL provides the first line of defense against cyber-criminals attempting to intercept communications. The building blocks of trusted network communication are Secure Socket Link (SSL) certificates, an encryption technology installed on web servers that allows transmission of all data through an encrypted connection. Using a public key infrastructure (PKI), SSL certificates authenticate the website and the endpoint server, making it extremely difficult for them to be forged or imitated.

Quick SSL - Domain Validation (DV)

QuickSSL is one of the most popular and inexpensive SSL certificates on the market. This hassle-free cert is an ideal entry-level solution – a perfect choice for websites such as blogs and personal pages that don't transact large amounts of user info. In most cases, the certificate can be issued in 15 minutes or less. Like all low-cost SSL solutions from Blockdos, PositiveSSL brings encryption, validation, and trustworthiness to your site. It comes with $10,000 warranty, key length from 2048 and encryption up to 256-bit.

Pro SSL - Organization Validation (OV)

ProSSL is an affordable professional-level certificate. It verifies the company behind the website as well as domain name and carries a $50,000 warranty. This full business-validated certificate provides improved credibility and consumer trust. Each ProSSL Certificate comes with a FREE Corner of TrustLogo and can be issued within two business days.

Premium SSL - Extended Validation (EV)

Get the green bar! Our PremiumSSL EV SSL certificate will increase your sales by showing your customers a visible secure sign, the green browser address bar. The green bar, exclusive to EV SSL certificates, assures your site visitors that they are transacting business on a highly secured, trustworthy domain. PremiumSSL provides full business validation and can take up to 10 business days to issue.

Benefits to your Business

- **Additional security** layer on top of your website
- **Improve website ranking** in Google and other search engines
- **Validate your business** through OV SSL certificate
- **Gain visitor trust** by displaying Trust Seal with SSL
- **Increase buyer approval** through padlock in address bar by using EV SSL

Technical Benefits

- **Get strongest encryption** through SHA-2 & 2048-bit encryption
- **Avoid browser warnings** for non-SSL websites
- **Protect multiple websites** by Multi-domain SAN SSL
- **Protect all subdomains** by Wildcard SSL certificate
